Dependent on surface profile and condition, wastage etc.

## ПОДГОТОВКА НА ПОВЪРХНОСТТА

Concrete must be at least four weeks old, completely dry and free of surface laitance, contaminants, ice, water and previous poorly bonded coatings. Remove grease, oil and all other surface contaminations by alkaline or high pressure (steam) cleaning in combination with appropriate detergents. Sand previous coatings which are in good condition to remove gloss and to roughen the surface slightly. A trial area is advisable to test compatibility with previous coatings. Very smooth concrete or concrete with surface laitance (a weak dusty layer) should be abraded or etched with Rust-Oleum Surfa-Etch 108 to ensure adequate adhesion. The concrete should be thoroughly washed down and allowed to dry after.

On poreus substrates first apply BINDER SEALER (3377).

Metal surfaces should be cleaned and derusted and coated with METAL PRIMER (3388).

## НАЧИН НА УПОТРЕБА

The use of Dacfill Fleece is recommended for all projects for added strength.

Start with the gutter areas. Ensure that the upstand termination detail is cut into the mortar joint on the inside upstand. Precut the reinforcement Dacfill Fleece to fit the edge detail on the balcony. Apply Fast Balcony Basecoat to edge details and reinforce with Dacfill Fleece. Allow to dry.

Mask-off gutters / edge details.

Precut pieces of the Dacfill Fleece to the correct width and about 1 meter long. Apply Fast Balcony Grit Coat and reinforce with fleece (overlap each piece of fleece by 50 mm). Roll with special metal detail roller, blend in the Dacfill Fleece joints then cast white aluminium oxide grits (300 micron) into the wet coating at approximately 1.0 kg/m<sup>2</sup> to increase surface wear, protection and slip resistance.
